What's New in the?

Highlight an area of your drawing and quickly see which objects affect it. Use AutoCAD's built-in clip feature to mark areas that will be tracked, as well as similar edits. Automatically create the objects that intersect with the area. For each object that affects the area, a marker is automatically added to the drawing. Define different styles for objects to distinguish them in your drawing. Drag and drop objects from the online marketplace directly into the drawing to reference them. The marketplace is now accessible from the ribbon. Create lightweight 3D models with the 3D Warehouse for simple assembly of parts and collaborative modelling. For legacy systems, imports and edits are still applied when an import is applied. A draft update will be available for AutoCAD 2023 within a few months of the product's release. Cadastral Data for Use with Civil Engineering and Land Surveying: Repurpose existing plans and cadastral information to enhance your existing drawings or create your own. A new Repurpose tool uses topological and geometric features in cadastral data to pinpoint areas in the drawing that are similar to the data. In AutoCAD, these areas are automatically highlighted and text is added for annotations. The tool can automatically open the file and highlight only the text that matches. Alternatively, it can open the file and highlight all text. Import data from existing layers, or create your own. Import CAD Models: Import high-quality 3D models from a 3D Warehouse. Model the latest 3D printing processes from the 3D Warehouse. Import CAD models and bring your files into a drawing. An import feature is available in AutoCAD for AutoCAD LT 2023. Export to DXF, DWG, dxf, and stp are available. Visualize and Convert Large Data: Drag and drop images and tables from the web and see them in a drawing. The new Table Browser makes it easy to browse images from websites, as well as table structures from Excel and Google sheets. You can easily search and manage large data sets in the new Data browser. Search for common parameters, such as UserID, Date and so on. You can then edit, append, and delete data directly from the browser. For example, select data from the Data Browser, then click Insert, and the data is appended to the drawing.
